We claim:

20

- 1. A process for preparing a hydroxylation catalyst by
 - i) embedding a cytochrome P450 monooxygenase in a sol-gel matrix,
- 5 ii) embedding an enzymatic NADPH-regenerating system in a sol-gel matrix, and combining the two components i) and ii) unless they were already mixed together before the embedding.
- A process as claimed in claim 1, wherein enzymes which had originally been
 isolated from the genus Bacillus are used as monooxygenases.
 - 3. A process as claimed in claim 2, wherein the monooxygenases have been isolated from Bacillus megaterium.
- A preparation comprising a cytochrome P450 monooxygenase and an enzymatic NADPH-regenerating system in a sol-gel matrix.
 - A process for the enzymatic hydroxylation of a substrate by reacting the substrate with a hydroxylation catalyst which can be prepared as claimed in any of claims 1 to 3.
 - 6. A process as claimed in claim 5, wherein ß-ionone is employed as substrate.
